

DOOR COORDINATOR

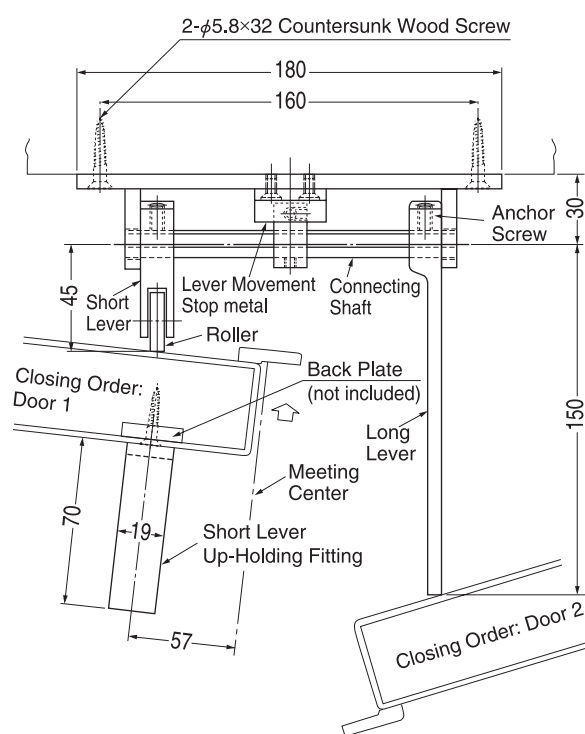

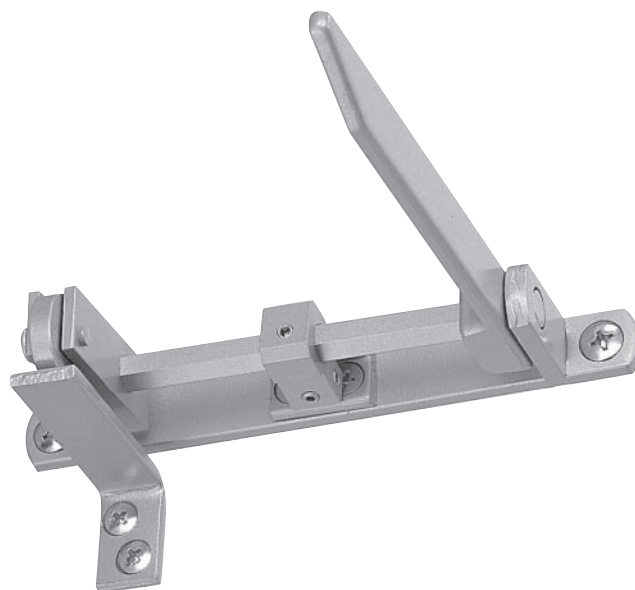

SF-150F

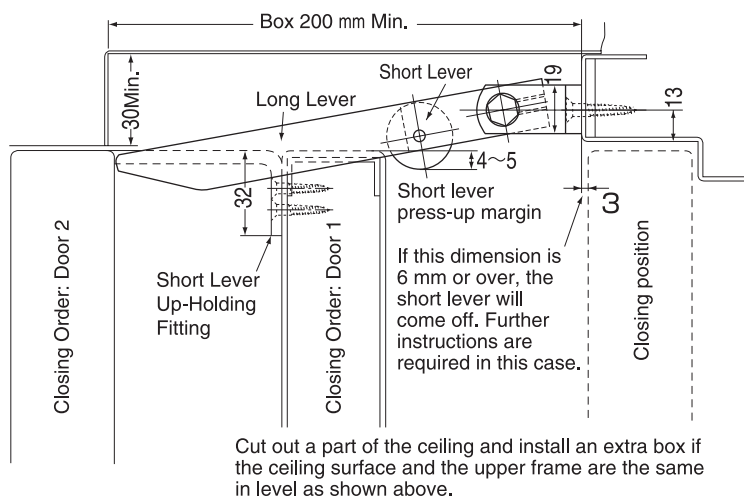

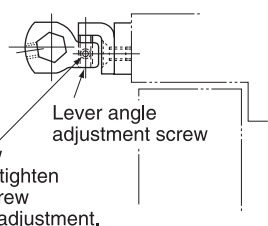

"NEW STAR" Door Coordinator has been so developed in the patented design as to permit door closing in the fixed order. This Door Coordinator is suitable for fire-proof metal doors of center meeting type with overlapped center edger.

The doors incorporating this unique Door Coordinator are always kept open by means of "NEW STAR" door closers or floor hinges with fusible metals. In case of fire, the fusible metals will melt with heat thus enabling the door closers or floor hinges to close the doors automatically. The Door Coordinator then permits these doors overlapped in the fixed order at the final closing stage regardless of individual closing speeds.

When fixing "NEW STAR" Door Coordinator, fix it to the top jamb face with the fixing screws provided in such a manner that the longer lever should always face to the door overlapping to the other. The shorter lever up-holding metal is to be fixed to the back of the door to be closed first in a straight line with the top edge of this door.

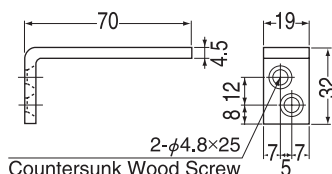

Lever movement stop metal
(for long and short levers)

SF-150F Installation Frame Face of Top Jamb

When the ceiling forms the top jamb, cut away part of the ceiling to provide an appropriate top jamb.

★ Should overlapping of the doors be in the reversed order, then the two levers (short and long) must be detached and placed in the opposite positions to those shown in the diagram.
